

MOUNTED MACHINE GUN SUPPRESSORS

5.56 mm (.223) / 7.62 mm (.308)

Especially for mounted machine guns B&T has developed a new line of suppressors in 5.56 mm (.223) and 7.62 mm (5.56) in order to use the full potential of the weapons while minimizing the drawbacks.

Mounted Machinegun Suppressor	
Caliber:	5.56 / 7.62 mm
Length:	190 mm
Extending length:	155 mm
Weight:	1.0 kg
Reduction:	ca. 14 dB
Color:	grey
Material:	Inconel/Thermax

The B&T Mounted Machine Gun suppressor was developed by B&T by a request of the OEM producer of the MINIMI. The suppressor however can be adopted for almost any 5.56 mm or 7.62 mm machine gun. As opposed to other designs made by B&T, this suppressor is designed for use with mounted weapons. Weight of the suppressor therefore was not of a primary importance. B&T produces other suppressors which are lighter and better suited for dismounted use.

The B&T Mounted Machine Gun Suppressor offers various advantages to the user. Besides the obvious purpose of reducing the sound of the gun more than 14 dB, which makes command and communication easier, reduction of the muzzle flash is of paramount importance. As the muzzle flash gives away the position of the gun immediately, its reduction greatly adds to the safety of the shooter as its position is less visible, especially in the hours of twilight or darkness.
